

Nodeware® is an efficient and lightweight vulnerability management solution that enables businesses to easily monitor their network and identify security gaps—all while running silently in the background during normal business hours.

### Continuous Scanning

Continuously scan and monitor customer networks for new assets and vulnerabilities with Nodeware. Our patented, industry-leading solution scans around-the-clock, even during business hours, with no impact to the network.

### Simple Setup

Nodeware is an easy-to-use solution with an intuitive dashboard. With virtual network sensors and agents for Windows, Mac, and Linux endpoints available, it's easy to setup and begin scanning your customers' complete environment.

### New Device Alerts

Bring unmatched value to customers with real-time alerts for new devices and new vulnerabilities. Nodeware provides notifications via email, Slack, PSA integrations, and its dashboard, so you can help keep your customers updated and protected.

### Insightful & Robust Reporting

Nodeware includes scheduled or on-demand reporting capabilities, allowing MSPs to run detailed or executive summary reports, useful for compliance and auditing requirements, customer communications, and ongoing management.

### Scalability

Nodeware is a multi-tenant solution, scalable for SMBs to Enterprise organizations, providing flexibility for your entire customer base. Nodeware's licensing model comes in monthly or annual subscriptions, enabling you to pay as you grow.
