Collaborative Email Security for Microsoft 365

The scalability, cost savings, and standardization offered by Microsoft 365 have made Microsoft hugely popular with SMBs. Its popularity with cybercriminals, however, is creating enormous challenges. From dynamic phishing emails to evasive malware, email is the #1 entryway to Microsoft 365. SMBs need a solution that catches the threats that Microsoft misses.

Vade for M365 is an integrated, low-touch email security solution for Microsoft 365 that is powered by Al and enhanced by people. Featuring a collaborative Al engine that continuously learns from an alliance of human and machine intelligence, Vade for M365 blocks the advanced threats that bypass Microsoft.

BENEFITS

- Protects your business from email-borne cyberattacks
- ▼ Catches 10x more advanced threats than Microsoft
- Blocks sophisticated threats that bypass traditional solutions
- Automatically removes threats post-delivery

- Delivers automated phishing awareness training to reinforce cybersecurity best practices
- ▼ Transparent solution that is invisible to end users
- → No delay in email delivery
- → No end-user training required

FEATURES

Anti-Phishing

Phishing emails impersonate the brands your users trust the most. Using sophisticated social engineering techniques, phishers lure victims with alarming or tempting subject lines to trick them into clicking on dangerous links to visit fraudulent websites or download malware or ransomware.

Vade for M365 scans all elements of email, including email addresses, links, images, and attachments, blocking advanced phishing attacks that bypass other solutions. Vade also scans all webpages linked from emails to determine whether the pages are safe or fraudulent.

Anti-Spear Phishing and Business Email Compromise (BEC)

Spear phishing emails impersonate individuals rather than brands. With the goal of manipulating users into taking an action, spear phishers use friendly correspondence and urgent language to pressure users into scheduling wire transfers, sharing account credentials, purchasing gift cards, changing bank account numbers, and more.

Vade for M365 examines the entire email to identify the subtle signs of spear phishing that cannot be detected with URL or attachment scanning, including forged display names and suspicious textual content. If spear phishing is suspected, Vade displays a warning banner in the email, alerting the user that the email could be fraudulent.

FEATURES (continued)

Anti-Malware and Ransomware

Malware is a computer virus designed to damage computers, hardware, and networks. Sophisticated malware viruses can change their behavior and even hide from email filters until executed, with the ultimate goal of stealing data, spreading to other systems, or, in the case of ransomware, disabling systems and networks.

Vade for M365 analyzes malicious characteristics of email, webpages, shared files, and attachments to detect evasive malware and ransomware viruses. Going beyond traditional malware analysis, Vade for M365 uses behavioral-based malware detection to block malware in real-time, while causing no delays in email delivery for your end users.

Insider Threat Protection

From forwarding a phishing email to sharing a malware-infected attachment, a simple mistake from an employee can quickly spiral into a cybersecurity incident. While insider threats often stem from human error, cybercriminals can also take control of Microsoft 365 accounts via phishing emails and send malicious emails internally throughout an organization.

Vade for M365 scans internal email traffic to prevent insider attacks from compromised Microsoft 365 accounts, blocking phishing, spear phishing, and malware/ransomware—before it spreads throughout your business.

BENEFITS

- **Auto-Remediation:** Continuously scans email and automatically removes messages from users' inboxes when new threats are detected. Admins can also manually remediate messages with one click.
- **Phishing Awareness Training:** Delivers automated, contextual training with real phishing emails and webpages to course-correct when a user opens a phishing email or clicks on a phishing link.
- **Threat Intel & Investigation:** Integrates Vade with your threat monitoring and response software and provides advanced tools for threat investigation and response.
- **▼ Integrated Feedback Loop:** Transforms user feedback into vital threat intelligence that is used to continually strengthen the filter and the efficiency of Auto-Remediate.

Vade is a global cybersecurity company specializing in the development of threat detection and response technology with artificial intelligence. Vade's products and solutions protect consumers, businesses, and organizations from email-borne cyberattacks, including malware/ransomware, spear phishing/business email compromise, and phishing.

Founded in 2009, Vade protects more than 1.4 billion corporate and consumer mailboxes and serves the ISP, SMB, and MSP markets with award-winning products and solutions that help increase cybersecurity and maximize IT efficiency.
